

If you need any help with application please call or email me

It is very easy to apply.

Clean the area well with Denatured alcohol or any cleaner that will not leave a residue. You want the area squeaky clean.

Peel off the DESMO making sure it attaches to the upper film

rub on well with fingers.

Use light fingernail strokes to make sure it is stuck on well.

Carefully peel off the clear plastic.

Voila, your done!!

here are some pictures of desmo applications

<http://jcpakbikes.com/desmo/>

After many searches and asking old Skool Desmo guys, the proper area of application is under the

DU & ATI

Left side is under the ATI= line up the right most desmo O to the I

Right side is under the DU= line up the desmo D to the DUCATI D

OR

put it anywhere you want it's your tank!!!!

Good luck

JC
